

ELEVA Absolute Return Europe - Class R

 29/05/2026
 Monthly report

Investment objective and approach

- Aiming to achieve an absolute return over the medium term through capital growth
- Investing primarily in European equities and equity related securities on both a long and short basis
- Differentiated and disciplined bottom up investment philosophy complemented by a macroeconomic overlay to support sector positioning
- Flexible net exposure between -10 and +50% driven by fundamental idea generation and market volatility
- Recommended investment horizon : ≥ 5 years

Monthly Comment

European markets continued their rebound, with the Stoxx Europe 600 up 3%, bringing its year-to-date performance to 7.4%. The market showed strong resilience despite an ongoing geopolitical instability in the Middle East, marked by continued severe disruptions in the Strait of Hormuz and a series of conflicting signals regarding U.S.-Iran relations. Oil prices fell sharply over the month, with Brent down 19.2% to \$92, as investors gradually priced in the possibility of an agreement to extend the ceasefire and allow for a normal resumption of traffic through the Strait of Hormuz. However, the situation remained fragile at month-end: several issues remained unresolved, notably Donald Trump's formal approval, Iranian confirmation, the terms for controlling the Strait, sanctions, and the nuclear timeline. Against this backdrop, ELEVA Absolute Return Europe was up 1.91% this month.

The long book had a positive impact on performance and outperformed the major indices. Industrials, technology, and financials were the main drivers of performance. Conversely, utilities weighed on performance for the month.

Positive comments on steel prices supported **ArcelorMittal's** share price. Strong demand linked to artificial intelligence continues to support capital expenditures. **Prysmian**, **Siemens**, **ASML**, and **ASM International** thus contributed positively. The prospect of an extension of the ceasefire in the Middle East, along with falling oil prices, restored investor confidence in the business models of aircraft engine manufacturers **Safran** and **Rolls-Royce**. Finally, **UniCredit's** earnings and external growth strategy were well received by the market.

Potential political changes in the United Kingdom, some of which included plans to nationalize certain companies, affected local utilities, **SSE** and **Centrica**. With falling oil prices, and following a period of strong performance, the energy sector came under pressure, with **ENI**, **Galp**, and **Neste** contributing negatively to performance in May.

The short book had a negative impact on performance, with index hedges and single name short costing performance. Industrials, utilities, and energy were the positive drivers of the short book performance. Nevertheless, it was not enough to offset the negative contribution of financials, materials, and technology.

Regarding our proprietary macroeconomic indicators, the ELEVA Capital Index Europe (ECI) remains at a decent level, while the ECI Global is showing a strong recovery after a period of weakness, driven by the United States. The ECI China is pointing upwards again. It is still too early to assess the full extent of the damage caused by the conflict in the Middle East, but economic growth is likely to be impacted, while inflation will pick up again after a phase of deceleration. In this context, we believe that companies could still grow at a moderate pace: we note that corporates remain active in mergers and acquisitions and share buybacks.

The fund's long book exposure to Value has decreased from 57.0% to 53.8%, while its exposure to cyclical stocks has increased from 64.2% to 66.2%. Net exposure has increased from 26.9% to 31.8%, and gross exposure has decreased slightly from 151.9% to 150.5%.

Since inception, ELEVA Absolute Return Europe is up 69.78%.
