

ELEVA Absolute Return Europe - Class R CHF acc. (hedged)

30/06/2025
Monthly report

Investment objective and approach

- Aiming to achieve an absolute return over the medium term through capital growth
- Investing primarily in European equities and equity related securities on both a long and short basis
- Differentiated and disciplined bottom up investment philosophy complemented by a macroeconomic overlay to support sector positioning
- Flexible net exposure between -10 and +50% driven by fundamental idea generation and market volatility
- Recommended investment horizon : ≥ 5 years

2017											-0.60%	0.77%	

Monthly Comment

Markets fell in June, weighed down by geopolitical uncertainties and lack of progress on tariffs. The weakness of the USD also affected European markets. In our view, European economic news flow continues to point to a slow and steady recovery.

ELEVA Absolute Return Europe was up 0.17% this month.

The long book had a negative impact on performance but outperformed the move in relevant indices. Industrials, utilities and information technology were the main drivers of performance. Nevertheless, it was not enough to compensate for the fall in consumer discretionary, consumer staples and health care.

Siemens Energy had a strong performance, as analysts increased their expectations on gas and grid technologies divisions on the back of a boom in investment decision, and favorable price increases. Civil aerospace companies were particularly upbeat at a recent conference on the strength of the aftermarket, helping **Rolls Royce** and **Safran** reach new highs. Technology (**ASM International**) also had a good recovery with increased expectations on AI spend.

Adidas underperformed despite strong brand momentum, because of the lack of clarity on export tariffs to the US. **Assa Abloy** fell as analysts cut their numbers to reflect the depreciation of the US \$. Pharma names (**AstraZeneca**) were affected by continued uncertainty on drug pricing and export tariffs.

The short book had a positive impact on performance, with index hedges and single name shorts generating performance. The main sector drivers of the short book performance were financials, consumer staples and health care. Conversely, the performance of our shorts was penalized by consumer discretionary, utilities and energy.

Economic growth was decent in 2024, with low growth in Europe and in China balanced by an acceleration in the US. Falling inflation expectations reduce the risks of a Central Bank mistake. Our proprietary European macroeconomic index is improving gently, while the global one has also recovered since April. There might be some early signs of economic improvement in China. Patience is needed in Europe for interest rates and stimuli announcements to have an impact on economic activity. In that environment, we believe that corporates will still be able to grow at a moderate pace, but risks are growing with trade wars and US dollar weakness.

The exposure to Value in the long book decreased from 54.4% to 53.2% but the exposure to cyclicals increased from 49.8% to 57.0%. Net exposure slightly decreased from 35.5% to 35.2% but gross exposure increased from 142.2% to 144.8%.

Since inception, ELEVA Absolute Return Europe is up 38.09%.
