ELEVA Global Bonds Opportunities - Class I

Monthly report

Investment objective and approach

• The fund seeks to achieve a positive absolute return (net of fees) over the medium term by investing primarily in international bonds, issued by private or public entities, and currency markets via directional positioning along with relative value strategies.
• The top-down philosophy, built upon a proprietary method, is supplemented by fundamental analysis and relative value review of issuers and countries
• An active and pragmatic approach without structural bias in allocation, towards countries or sectors
• Flexible net exposure to overall duration expected to range between -4 to +4, and is guided by our market scenario analysis, market opportunities and volatility
• Recommended investment period: 2 years

9 months	-1.04%
1 year	-0.33%
3 years	15.63%
5 years	8.03%
Since inception	9.53%

Monthly Comment

Persistent inflation is no longer putting upward pressure on interest rates. In the United States, despite third-quarter growth showing no immediate signs of a recession (3.4% on an annualized basis in Q3) and PMI indicators still firmly in expansionary territory (composite PMI at 57.6 in October), the economic outlook is nevertheless prompting increased caution. Markets are increasingly pricing in the possibility that persistent high inflation (CPI at 3.7% year-on-year, compared with 3.2% in August) could eventually weigh on economic activity. The composition of US growth also highlights the significant role played by investments in artificial intelligence. A slowdown in such investments, if it falls short of market expectations, could therefore constitute a further factor undermining growth. In Europe, stagflation risks appear even more acute. Inflation has levels comparable to those in the United States (3.8% year-on-year), whilst growth remains more moderate and particularly uneven across countries. The fiscal and political situation in France is a cause for concern. The widening of the spread between French and German 10-year government bonds – from 116 to 153 basis points – is beginning to spill over into the Italian and Spanish bond markets. This fragmentation is exacerbating the divergence in financing conditions within the eurozone and further complicating monetary policy implementation across the euro area. As anticipated, the Fed and the ECB left their policy rates unchanged this month. US, German and Japanese 10-year government bond yields eased by 36 basis points to 4.93%, 27 basis points to 3.32% and 27 basis points to 2.77% respectively. Credit spreads widened significantly by 14 basis points for investment-grade bonds and 64 basis points for high-yield bonds. Finally, Lula's unexpected election victory in Brazil led to a sharp depreciation of the real, accompanied by a rise in bond yields.

ELEVA Global Bonds Opportunities generated a slightly positive return. Duration made a positive contribution, particularly thanks to the exposure to US and German bonds. The short positioning to Japanese interest rates was reduced. Emerging market debt, meanwhile, made a modest contribution to performance. The exposure to Brazil was increased following the election. Credit made a slightly negative contribution, an impact partially mitigated by the hedging via index-linked CDSs. Currency made a positive contribution thanks to the long exposure to the JPY against the EUR. Finally, relative value strategies made a positive contribution to performance, notably thanks to fund's positions designed to capitalize on the widening of the French sovereign spread and swap spreads relative to Germany. Profits have been taken on the short position on French bonds.
