

ELEVA Absolute Return Dynamic - Class A1 CHF acc. (hedged)

30/06/2025
Monthly report

Investment objective and approach

- Aiming to achieve an absolute return over the medium term through capital growth
- Investing primarily in European equities and equity related securities on both a long and short basis, with at least 50% of European equities
- Differentiated and disciplined bottom-up investment philosophy complemented by a macroeconomic overlay to support sector positioning
- Flexible net exposure between -20 and +100% driven by fundamental idea generation and market volatility
- Recommended investment horizon : ≥ 5 years

Performance

Sources: ELEVA Capital

As the share class was launched less than a year ago, there is too little data to provide any useful indication of past performance.

Monthly Comment

Market fell in June, weighed down by geopolitical uncertainties and lack of progress on tariffs. The weakness of the USD also affected European markets. In our view, European economic news flow continues to point to a slow and steady recovery.

The long book had a positive impact on performance, with industrials, technology, and financials being the main drivers. This offset the negative contribution from consumer sectors.

Siemens Energy had a strong performance, as analysts increased their expectations on gas and grid technologies divisions on the back of a boom in investment decision and favorable price increases. Civil aerospace companies were particularly upbeat at a recent conference on the strength of the aftermarket, helping **Rolls Royce** reach new highs. Technology (**ASM International**) also had a good recovery with increased expectations on AI spend.

Adidas underperformed despite strong brand momentum, because of the lack of clarity on export tariffs to the US. **Assa Abloy** fell as analysts cut their numbers to reflect the depreciation of the US \$. Pharma names (**AstraZeneca**) were affected by continued uncertainty on drug pricing and export tariffs.

The short book had a positive impact on performance, with index hedges and specific shorts contributing positively. The main sector drivers of the short book's performance were financials, consumer staples and industrials. Conversely, the short book was penalized by consumer discretionary, utilities and communication services.

Economic growth was decent in 2024, with low growth in Europe and in China balanced by an acceleration in the US. Falling inflation expectations reduce the risks of a Central Bank mistake. Our proprietary European macroeconomic index is improving gently, while the global one has also recovered since April. There might be some early signs of economic improvement in China. Patience is needed in Europe for interest rates and stimuli announcements to have an impact on economic activity. In that environment, we believe that corporates will still be able to grow at a moderate pace, but risks are growing with trade wars and US dollar weakness.

The long exposure to the *Value* segment decreased from 49.0% to 47.3%, while exposure to cyclical stocks increased from 45.6% to 50.4%. Net exposure increased from 70.4% to 74.7%, as did gross exposure, from 148.5% to 161.7%.
